### Future-proof RFID reader with high flexibility

ID ECCO Smart HF-BLE is a mobile RFID reader with powerful NFC / RFID interface for fast and safe working with standard RFID transponders. The latest Bluetooth LE 5.0 technology makes the device a future-proof investment for current and future mobile applications. The ID ECCO Smart is used wherever the read range of an NFC smartphone is insufficient for efficient work with RFID transponders or the ambient conditions require a more robust device. The read data are transmitted directly via Bluetooth LE interface to a host such as a smartphone, tablet PC, laptop or Bluetooth LE capable PC. ID ECCO Smart is ideal for programming and maintenance work in the LED lighting industrie, in transport and logistics as well as in healthcare. Furthermore, the device can improve or accelerate numerous processes in libraries relating to the handling of media equipped with transponders.

### Robust and power for a complete working period

The ID ECCO Smart withstands multiple drops from 1.6 m to concrete without any damage. This is made possible by the double-walled ABS plastic housing with protective rubber coating. Its protection class IP54 enables use in harsh environments, making the ID ECCO Smart a mobile NFC reader for almost all system environments. A long-lasting, high-capacity battery supplies the device with power for up to 16 hours, thereby enabling continuous work. The large and robust buttons of the ID ECCO Smart can be operated safely even when wearing gloves. Optical and acoustic signals as well as a vibration feedback acknowledge the work carried out and thus ensure error-free processes.
